

Soft-Core[™]

Carrier-based obturation—finally a better alternative.

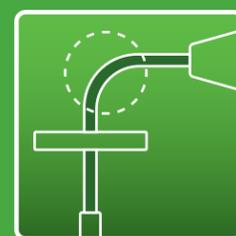

5 key reasons to obturate with Soft-Core™.

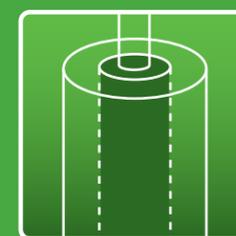

INJECTION MOLDED

Unlike other brands, Soft-Core carriers are injection molded for consistency.

BENDABLE HANDLE

The bendable handle allows for easier posterior access. The removable handle and hollow core creates a pilot hole for a post drill.

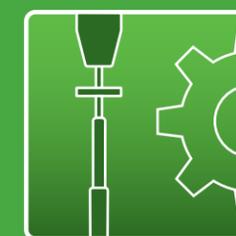

THINNER CORE

The core is thinner than other leading brands, allowing greater flexibility to navigate curved canals.

DENSER FILLS

A thinner core also means more gutta percha for denser fills, up to a .10 taper.

UNIVERSALLY COMPATIBLE

Soft-Core's one universal size taper fits most common root canal preparations.

5

Soft-Core™ from Kerr Endodontics, includes carriers, verifiers and an oven for a complete carrier based obturation system. Available either in the classic Soft-Core line, or branded to match TF Adaptive, Twisted File, and K3XF file systems.

The Soft-Core heater holds up to 4 obturators at a time.

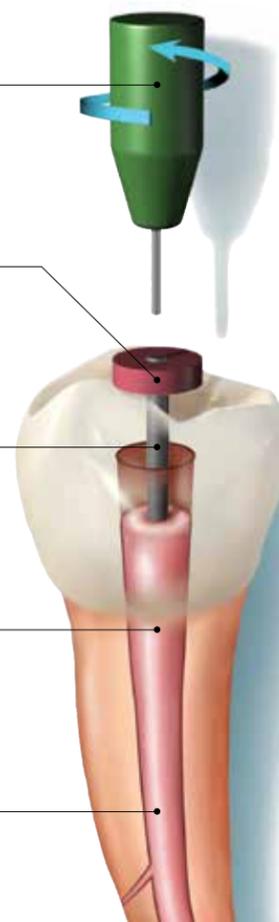

Bendable, easy-to-remove, twist-off handle

Removable handle creates a pilot hole for a post drill

Thinner core for greater flexibility to navigate curved canals

More gutta percha fills up to .10 taper

One size taper fits most common preps

A better solution for carrier-based obturation

The Soft-Core system was designed with the clinician in mind. With tip sizes from #20 through #60, matching verifiers and the Soft-Core oven, 3-dimensional warm vertical obturation is at your fingertips.

Simplicity

With a universal one-size taper, Soft-Core obturators have been designed to accommodate most common root canal preparations. Available in the convenient 6-pack, or economy size 36 pack, as well as branded TFA, TF, and K3XF to match your NiTi file system of choice.

Efficiency

The twist-off handle is easy to remove and leaves behind a pilot hole for when a post is to be used. Because the handle is flexible, it can be pre-bent to allow for greater posterior access.

Predictability

Unlike other leading carrier brands, Soft-Core carriers are injection molded in order to obtain consistent, accurate tolerances required in Root Canal Treatment.
