

DURASPOND™ EXPLORERS

PRECISION WITH A TWIST

FACT

Explorers are used for caries and calculus detection, exploration of pocket characteristics, furcations and restorations, making them crucial to an instrument set-up.

CHALLENGE

In order for a clinician to accurately chart and diagnose a patient during their regular appointment, they need to rely on the resilience and precision of their explorer to deliver optimal results.

SOLUTION

Hu-Friedy explorers are hand crafted from Duraspond steel, a specially blended steel alloy which provides flexibility, resilience and enhanced tactile sensitivity for even the most precise diagnostic procedures. Available in over 30 styles with several handle options, there is a Hu-Friedy explorer for every clinician and every patient.

SATIN STEEL XTS® EXPLORERS

Non-stick black XTS coating makes instrument perfect for contouring anatomy during composite restorations and reduces glare
