

THE RIGHT PARTNERSHIP
CAN CHANGE EVERYTHING.

Hu-Friedy  **EMS** 
ELECTRO MEDICAL SYSTEMS

A SHARED PASSION
WITH A SINGULAR VISION
TO ADVANCE
DENTAL PERFORMANCE

HU-FRIEDY AND EMS ARE JOINING FORCES TO REIMAGINE PROPHYLAXIS.

With nearly 140 years of combined experience and clinically proven products and processes, Hu-Friedy and EMS are ideally positioned to provide clinicians and patients with the most effective, comfortable, and economic prophylaxis protocol.

Hu-Friedy, founded in 1908 by Hugo Friedman, is a global leader in dental instruments. Headquartered in Chicago, Hu-Friedy inspires dental professionals to perform at their best through continuous product innovation and superior dental instrument manufacturing. Hu-Friedy's history of invention spans multiple product categories with the mission of improving lives through better dentistry—smile after smile. A passion for service and support is evident in everything we do.

EMS was one of the first companies to adapt piezoceramic technology for dental procedures. Founded in 1981 in Switzerland's Vallée de Joux—a valley known for watchmaking masterpieces—EMS has nurtured this tradition of Swiss precision and has applied it to the manufacture of medical precision equipment, including dental instruments. Their award-winning Piezon® ultrasonic scalers and industry-leading AIR-FLOW® air polishing units meet the most stringent standards for both elegant design and simple functionality.

BIGGER THAN A DEVICE, IT'S PROPHYLAXIS REIMAGINED.

THIS ADVANCED PROTOCOL INCLUDES THREE FUNDAMENTAL COMPONENTS:

AIR-FLOW® AIR POLISHING

The Hu-Friedy EMS AIR-FLOW® family of air polishing products delivers the most advanced and effective method for supra- and subgingival biofilm disruption and stain removal utilizing Swiss precision-engineered technology and soft-impact powders. When used subgingivally*, the AIR-FLOW® devices and powders can reduce periodontal pocket depth, remove biofilm, and help prevent peri-implantitis.

PIEZON® POWER SCALING

The Hu-Friedy EMS Piezon® power scaling products combine the precision of piezo technology, uniform power output, and ergonomics in four piezoelectric devices that will optimize treatment efficiency and increase both patient and clinician comfort. These products can be used in even the most difficult or sensitive cases, including subgingival scaling, implant maintenance, and endodontic treatments.

HAND SCALING

Hu-Friedy's industry-leading hand scaling portfolio offers over 1,000 products, including sickles, curettes, and specialty instruments. Manufactured in the U.S. in Chicago, Illinois, Hu-Friedy has a history of innovative products like Gracey curettes and subsequent After Five®, Mini Five®, and Micro Mini Five designs the revolutionary EverEdge® Technology and Nevi® series. Hu-Friedy consistently delivers the biggest variety of high-quality options for every type of scaling procedure.

Hu-Friedy is the exclusive distributor of EMS Piezon® ultrasonic scalers and AIR-FLOW® devices and products in the U.S. and Canada and is the only company that offers three key components needed to deliver the most advanced prophylaxis protocol.
