DEFEND[®]
by Mydent International

PREVENTIVE

“Works Better”

- Quick & Easy Application
- Universal Compatibility
- Antimicrobial Agent

“Lasts Longer”

- Abrasion, cervical erosions and preps
- Applications to vital crown preparations prior to luting with cements
- At the “prep” appointment to desensitize during temporization
- “The glutaraldehyde in Defend Desensitizer works by occluding (blocking) the microscopic tubules that compose dentin, thereby preventing the flow of fluid and decreasing sensitivity”

“Costs Less”

DEFEND Desensitizer is an equivalent formula to the market leader.

DEFEND Desensitizer Universal Desensitizing Agent

DEFEND Desensitizer is a superior desensitizing agent which can be placed under dental cements or temporary, provisional or - final restorative materials to reduce postoperative sensitivity. It can also be used for desensitization of amalgam restorations, either conventional or bonded. DEFEND Desensitizer contains HEMA to aid bonding primers to penetrate etched dentin. The HEMA base in DEFEND Desensitizer helps seal tubules, giving immediate relief from pain due to hypersensitivity. Most dentin resin bonding materials will benefit from DEFEND Desensitizer application. Its application reliably reduces post-op sensitivity by supporting the collagen framework for easier penetration of the adhesive, thus enhancing the dentin bond.

Packaging:	Item No:	Compares to*:
10ml bottle HEMA, Glutaraldehyde	#DD-1000	Desensitizer - Henry Schein[®] Gluma[®] Desensitizer - Heraeus
